Will you kindly send, if possible, a one-paragraph, TYPED (double-spaced) abstract of the following paper within the next two to three weeks? Please begin the abstract with the citation IN THE EXACT FORM AS HERE GIVEN:

Special attention is called to the following essential considerations to be kept in mind in preparing the abstract:

Emphasis. - Since abstracts serve to direct readers to current articles containing ANY contributions inviting or requiring their first-hand attention, the abstract must give concisely in considerable detail the topics, major and minor, concerning which NEW INFORMATION is presented, and, in brief, the new information itself, be it additions to knowledge; new applications of known facts or principles, or applications of such known facts or principles under new or different circumstances; new interpretations, theories, or hypothesis; or any other information based on observation, calculation, experiment, interpretation, etc. Compilations of known facts, resumes of literature, bibliographies, etc., when extensive, should be briefly noted, the abstract being so worded as to distinguish clearly between original contributions and other material in the article.

The indexes of abstracting journals are fundamental in reference work. These INDEXES ARE PREPARED EXCLUSIVELY FROM THE ABSTRACTS. It follows that what is not in the abstract can not find its way into the index and thus is in danger of being lost. This is an equally important reason why the adequate abstract must include mention of all entities concerning which new information is presented.

Length. - Although cost of publication and the readers' limited time require that abstracts be as brief as possible, no arbitrary limit is placed on length. The abstracts should be as long as necessary to fulfill their purposes. It is obviously easier for editors to shorten abstracts, where this can be done without injury, than to supply missing information. Organisms concerning which new information is presented should be mentioned by full scientific name wherever possible, including authority.

Style. - ONLY COMPLETE, CONCISE SENTENCES SHOULD BE USED; TELEGRAPHIC STYLE, because of its ambiguity, should be strictly AVOIDED. Tables should not be used, or only in very exceptional cases.

Important: If it should be impossible for you to furnish the abstract requested, kindly return this sheet promptly.

Very truly yours,
